## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 4-25, 28-41, and 48-50, drawn to a method of securing security data in the field programmable gate array, classified in class 713, subclass 193.
  - II. Claims 42-47, drawn to a method of programming the field programmable gate array to creating an encryption circuit, classified in class 716, subclass 16.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention I can have multiple methods to fabricate the FPGA to also do encryption. The subcombination has

separate utility such as fabricating different conductive layers of the FPGA for encryption purpose.
